

- Design of Steel Configuration to support the house off its foundation and creating a rail system with the steel beams so the house can smoothly move to the desired area.
- After the the completion of the project the we redesign the foundation to satisfy the needs of the home or building. (see [Reconstruction](#) for description and photos of the process.)
- Are Survey team will conduct a full analysis of the property so when the job is completed the home or building is In the same location as it previously was.
